WiFi Connection Guide

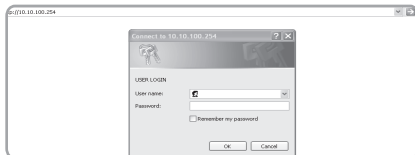

Reset WIFI module to factory setting ①

- It is necessary to reset WIFI module to factory setting.
- After steps: Setting->Network->WiFi, choose 'Default module' on the screen, the WiFi setting will be reset to factory setting.

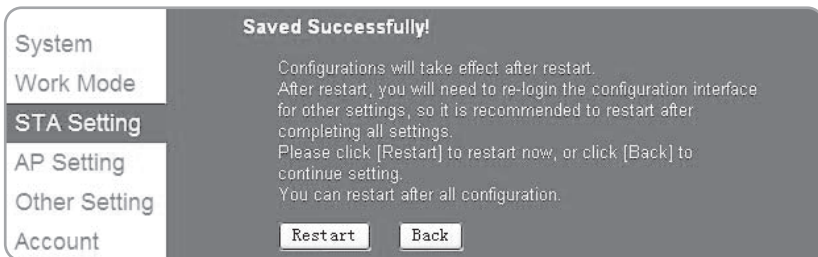

- After resetting WIFI module, you can search a wireless network named HF-LPB100 or HF-LPB with a laptop. This network can be connected directly without any password, and connect it please.

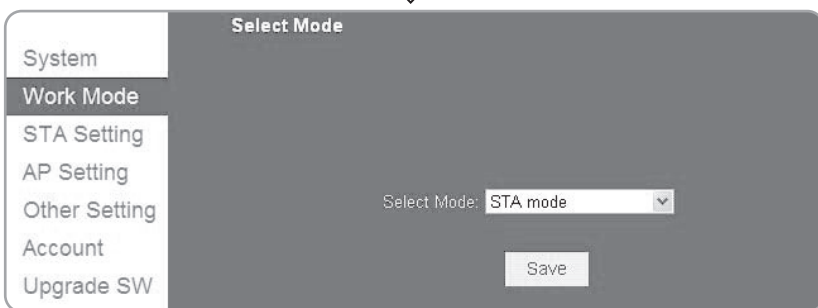

- Input the IP address 10.10.100.254 in your browser, and a login window will appear after pressing the "Enter" key. The user name is "admin", and the password is "admin" too. Please input the login messages and click "OK".

System	Network Name (SSID) Note: case sensitive	Router_1	Scan
Work Mode	Encryption Method	WPA2PSK	
STA Setting	Encryption Algorithm	AES	
AP Setting	Password	*****	Show passwords
Other Setting	Obtain an IP address automatically	Enable	
Account	IP Address	192.168.1.100	
Upgrade SW	Subnet Mask	255.255.255.0	
Restart	Gateway Address	192.168.1.1	
Restore	DNS Server Address	192.168.1.1	
			Save

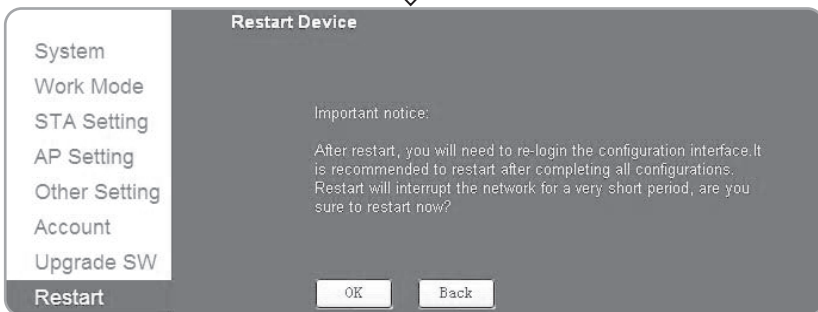

- Click "STA Setting" and set as follow:
 - Input the network name and password of your Router.
 - Make it enable to obtain an IP address automatically.
 - Click "Save" to save the settings.

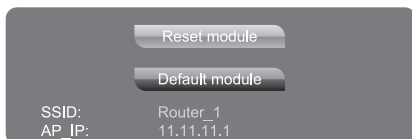

- Don't restart after saving successfully, please click "Back" to do following settings.

- Click "Work Mode", select "STA mode", and then click "Save". Note: Don't restart after saving successfully, please click "Back".

- Go to the "Restart" page and click "OK" to restart. So far, settings of WIFI parameters are finished.

Get IP Address of WIFI: After having finished setting WIFI parameters, user can get current IP address of WIFI through the LCD of inverter. It means that the connection between WIFI module and Router haven't been established if the IP address is 0.0.0.0. The method to read the IP address is showed as the picture.
